No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention provides the protein and coding sequences for the variable regions of human monoclonal antibodies which are immunoreactive with human immunodeficiency virus-1 (HIV-1) envelope glycoprotein gp120. These can be used in diagnosis and therapy of HIV-1 infection.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               urchin and tomato. These were derived from expressed sequence the from the organism of interest. They can be used in diagnostics, forensics, gene mapping, identification of mutations, to assess biodiversity and for nutritional purposes. The present sequence is a protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Isolated polypeptide for treatment of diseases, antibodies and research use -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        number of hits satisfying chosen parameters:

Database

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Ig kappa chain precursor V-III region (Hic) - human

Species: Homo sapiens (man)

Accession: PL0021 Date: 30-Jun-1990 #sequence_revision 30-Jun-1990 #text_change 21-Jan-2000

ი

A; Molecule type: mRNA A; Residues: 1-129 < KIP>

Comment: The protein is

one of the surface immunoglobulin M autoantibodies expressed

A; Cross-references: GDB:136266

A;Gene: GDB:IGKV3 C;Genetics:

A;Map position: 2p12-2p11 C;Complex: An immunoglobulin heterotetramer subunit consists of two identical light (k hain disulfide bonds. In some cases, such as IgA and IgM, the subunits associate into immunoglobulin Cases, sur V region;

They are used for treating cancer, infectious diseases and promoting beneficial autoimmune creations for the treatment of diseases with inflammatory or allergic omponents. The polyvalent or polyclonal preparations are useful for creating autoimmune diseases such as rheumatoid arthritis, myasthenia gravis and lupus erythematosus, multiple sclerosis, insulin-dependent diabetes mellitus, transplant rejection, and inflammation, graft versus

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Lymphocyte mRNA was converted to cDNA and subjected to PCR amplification using primers specific for heavy and light chain variable regions. The amplification products were inserted into a dicistronic vector to produce a library of fragments. E.coli Xii Blue cells were transformed with the library. Filamentous phage were produced which expressed the MAB regions on their surface. Panning with gpl20 and gp41 resulted in the recovery of immunoreactive clones. The light chain VL region sequence AARS4279 neutralises HIV1

                                                                                                                                                                                                                                                                                                                                                                       Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     geq

                        Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    number of hits satisfying chosen parameters:

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 number of hits satisfying chosen parameters:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      CC AAB67490-99 and AAB67501-06 represents complementarity determining CC regions (CDRs) of human antibodies. The antibodies specifically bind to CC human cytocoxic T lymphocyte associated antigen-4 (CTLA-4). Such CC antibodies are used in methods for inducing, augmenting or prolonging CC an immune response to an antigen in a patient, where the antibodies are CC block binding of human CTLA-4 to human B7 ligands. The antibodies are CC calso useful for treating autoimmune disease in a subject caused or CC exacerbated by increased activity of T cells and for treating prostate CC cancer, melanoma or epithelial cancer. A polyvalent or polyclonal CC antibody preparation comprising two antibodies of the invention are CC treating cancer, infectious diseases and promoting beneficial autoimmune expenses and promoting beneficial autoimmune comprising a manune response in a patient. They are used for CC treating cancer, infectious diseases with inflammatory or allergic components. The polyvalent or polyclonal preparations are useful for comparation autoimmune diseases with a patient or useful for comparation and lupus erythematosus, multiple sclerosis, insulin-dependent compared the propagation, graft versus

                                                                                                                                                            The present sequence represents the light chain variable region of CC human antibody 1001. This antibody specifically binds to human CC cytotoxic T lymphocyte associated antigen-4 (CTLA-4). Such antibodies CC are used in methods for inducing, augmenting or prolonging an immune CC response to an antigen in a patient, where the antibodies block CC binding of human CTLA-4 to human B ligands. The antibodies are CC also useful for treating autoimmune B ligands. The antibodies are CC exacerbated by increased activity of T cells and for treating prostate CC cancer, melanoma or epithelial cancer. A polyvalent or polyclonal CC antibody preparation comprising two antibodies of the invention are CC useful for suppressing a immune response in a patient. They are used for treating cancer, infectious diseases and promoting beneficial autoimmune CC reactions for the treatment of diseases with inflammatory or allergic components. The polyvalent or polyclonal preparations are useful for treating autoimmune diseases such as rheumatoid arthritis, myasthenia CC gravis and lupus erythematosus, multiple sclerosis, insulin-dependent const disease.

The present sequence represents the heavy chain variable region of CC human antibody 1001. This antibody specifically binds to human composition of the human antibody 1001. This antibody specifically binds to human composition of the human composition of the human composition of the antibodies are segonse to an antigen in a patient, where the antibodies block composition of human CTLA-4 to human 87 ligands. The antibodies are composition of the composition of T cells and for treating prostate composition of T cells and for treating prostate concer, melanoma or epithelial cancer. A polyvalent or polycional concer, melanoma or epithelial cancer. A polyvalent or polycional control preparation comprising two antibodies of the invention are useful for suppressing a immune response in a patient. They are used for treating cancer, infectious diseases and promoting beneficial autoimmune reactions for the treatment of diseases with inflammatory or allergic components. The polyvalent or polycional preparations are useful for treating autoimmune diseases such as rheumatoid arthritis, myssthenia gravis and lupus erythematosus, multiple sclerosis, insulin-dependent

                                                                                                                                                                                                                                                                                                                           CC This invention relates to a new human antibody specific for human CC interleukin-12 (IL-12). The invention also includes antigen binding portions that bind to IL-12. Sequences AAB39485-B35516 represent human CC anti-IL-12 antibody heavy and light chain complementarity determining CC region (CDR) amino acid sequences, and also includes variable region CC manino acid sequences. Other variable region amino acid sequences are CC given in AAB39517-B39560 and AAB40068-B40149. Sequences AAB39772-B40063 CC represent other CDR sequences. Light chain CDR3 consensus sequences are CC given in AAB40067. Primers used in the identification and CC construction of the antibodies of the invention are given in AAB40067. The antibody of the invention are given in AC61062-C61071. The antibody of the invention is a neutralising CC antibody and has antirheumatic; antiarthritic; antiaclerotic; CC cardiant; antiparasitic; neuroprotective; antipasoriatic; antiaclerotic; CC cardiant; antiparasitic; antipacterial and immunosuppressive activity. CT construction is disease, multiple sclerosis and relemantic darthritis. C especially Crohn's disease, multiple sclerosis and relemantic connection in the creatment of the antipation and the transmitter of a pharmacontic connection.
                                                                                                                                                                                                                                            Matches
